

Nursery Services and Contract Growing

We carry out a variety of horticultural activities in our nursery including seed cleaning and processing. Using specialist sowing equipment we contract grow large numbers of plug plants to order.

Seed Processing

Following harvesting seed is dried and cleaned to a high standard using a variety of methods and machinery including threshing, aspiration, and sieving tailored to individual seed sizes.

Plug plants

Plug plants of native wildflower species are grown to the highest quality using sustainable, peat-free growing media. Some species have very specific propagation requirements for which we use a germination cabinet. Plug plants are cared for using organic methods until ready for use in planting schemes. For more information please refer to our data sheet on [Plug Plants](#).

Contract growing

In addition to our standard range of products we can grow large numbers of plants specifically to order. A Hamilton seeder provides a fully automated plug plant production system capable of sowing 10,000 seeds per hour. The resultant plants can be provided as plugs or fully grown plants depending on the needs of the client or project.
